Per-batch statistics

Batch	Responses	Average score	Pass rate	Hallucination rate
Batch 2	5	75.25	60%	40%

Most frequent evaluation issues

Most frequent evaluation issues

Category	Issue	Occurrences	Share of responses
Contradicted claim	The capital of France is London.	1	20%
Missing aspect	Explain how it occurs	1	20%
Unsupported claim	Python has readable syntax, a large library ecosystem, supports multiple programming paradigms, and is widely used in data science and web development.	1	20%
Verdict issue	Critical rule triggered: 100% of checked claims are directly contradicted by the evidence (severe contradiction), so the verdict cannot be higher than Fail.	1	20%
Verdict issue	Critical rule triggered: accuracy score is 1 (completely incorrect / contradictory), so the verdict cannot be higher than Fail.	1	20%
Verdict issue	Critical rule triggered: hallucination status is 'Hallucinated' (every checked claim is contradicted by the evidence), so the verdict cannot be higher than Fail.	1	20%
Verdict issue	Hallucination status is 'Hallucinated' (1 of 1 claims flagged).	1	20%
Verdict issue	Hallucination status is 'Partially hallucinated' (1 of 1 claims flagged).	1	20%
Verdict issue	Low accuracy (1/5): Completely incorrect / contradictory.	1	20%
Verdict issue	Low accuracy (2/5): Mostly incorrect.	1	20%

Improvement recommendations

- 1 of 5 responses (20.0%) were graded Fail. Review those responses first: they carry the critical accuracy or hallucination rules.
- 1 of 5 responses (20.0%) need improvement, so they cleared the failure rules but stayed below the 75-point pass threshold.
- 2 of 5 responses (40.0%) were flagged as partially or fully hallucinated. Ground those answers in the supplied evidence before reuse.
- 1 claims directly contradicted the evidence. Contradictions are the most severe class of error and should be corrected first.
- 1 claims could not be verified against any evidence. Either supply supporting sources or remove the unverifiable statements.
- Average Accuracy is 3.6/5, below the 4.0/5 target. Accuracy is the weakest lever available on this set of responses.
- The most frequently missing aspect was "Explain how it occurs" (1 of 5 responses). Cover it explicitly in future answers.

Individual results

All evaluated responses

ID	Question	Rel	Acc	Comp	Overall	Verdict
1	What is Python?	5	5	5	100	Pass
2	What is photosynthesis? Explain how it occurs and mention its products.	4	5	3	86.25	Pass
3	What is the capital of France?	5	1	5	35	Fail
4	What are the advantages of Python?	4	2	5	55	Needs Improvement
5	What is machine learning?	5	5	5	100	Pass

Question

What is Python?

AI response

Python is a high-level programming language known for its simple syntax and wide range of applications.

Reference answer

Python is a high-level, general-purpose programming language known for its readable syntax and used in web development, automation, data science, and artificial intelligence.

Source information supplied

Python basics reference

Scores and verdict

Dimension	Result
Relevance	5/5
Accuracy	5/5
Completeness	5/5
Hallucination	No hallucination
Weighted overall score	100/100
Final verdict	Pass

Agent reasoning

Agent	Reasoning
Relevance judge	The response addresses 100% of what the question asks about (semantic similarity 0.83, combined relevance signal 0.95), which falls in the 'Completely relevant' band. This judge measures only whether the question was addressed; factual correctness is evaluated separately by the Accuracy Judge.
Accuracy judge	Checked 1 claim(s) against the reference answer: 1 confirmed by the reference answer. Verdict: Completely correct.
Completeness judge	Identified 1 requirement(s) in the question: 1 addressed, 0 partially addressed, 0 missing. Verdict: Completely complete.
Hallucination detector	Extracted 1 claim(s) from the response and checked each against the available evidence: 1 supported, 0 unsupported, 0 contradicted. Overall status: No hallucination. Unsupported claims are unverified by this evidence, not proven false.
Verdict agent	Weighted overall score 100.00/100 (accuracy 100, hallucination 100, completeness 100, relevance 100; weights 35/30/20/15) maps to a base verdict of 'Pass'. Final verdict: 'Pass'. No major issues identified across any of the four judges.

Supporting evidence used

- Python is a high-level, general-purpose programming language known for its readable syntax and used in web development, automation, data science, and artificial intelligence.

Hallucinated or unsupported claims

No claim in this response was unsupported or contradicted.

Completeness: missing aspects

No missing aspects were identified for this response.

Result 2: 2

Question

What is photosynthesis? Explain how it occurs and mention its products.

AI response

Photosynthesis is the process by which plants use sunlight, carbon dioxide, and water to produce glucose and oxygen.

Reference answer

Photosynthesis is the process by which green plants use sunlight to convert carbon dioxide and water into glucose and oxygen.

Source information supplied

Biology reference

Scores and verdict

Dimension	Result
Relevance	4/5
Accuracy	5/5
Completeness	3/5
Hallucination	No hallucination
Weighted overall score	86.25/100
Final verdict	Pass

Agent reasoning

Agent	Reasoning
Relevance judge	The response addresses 40% of what the question asks about (semantic similarity 0.77, combined relevance signal 0.51), which falls in the 'Mostly relevant' band. This judge measures only whether the question was addressed; factual correctness is evaluated separately by the Accuracy Judge.
Accuracy judge	Checked 1 claim(s) against the reference answer: 1 confirmed by the reference answer. Verdict: Completely correct.
Completeness judge	Identified 3 requirement(s) in the question: 2 addressed, 0 partially addressed, 1 missing. Verdict: Partially complete. Missing: Explain how it occurs.
Hallucination detector	Extracted 1 claim(s) from the response and checked each against the available evidence: 1 supported, 0 unsupported, 0 contradicted. Overall status: No hallucination. Unsupported claims are unverified by this evidence, not proven false.
Verdict agent	Weighted overall score 86.25/100 (accuracy 100, hallucination 100, completeness 50, relevance 75; weights 35/30/20/15) maps to a base verdict of 'Pass'. Final verdict: 'Pass'. Consolidated issues: Missing from the response: Explain how it occurs.

Supporting evidence used

- Photosynthesis is the process by which green plants use sunlight to convert carbon dioxide and water into glucose and oxygen.

Hallucinated or unsupported claims

No claim in this response was unsupported or contradicted.

Completeness: missing aspects

- Explain how it occurs

Major issues

- Missing from the response: Explain how it occurs.

Result 3: 3

Question

What is the capital of France?

AI response

The capital of France is London.

Reference answer

The capital of France is Paris.

Source information supplied

Geography reference

Scores and verdict

Dimension	Result
Relevance	5/5
Accuracy	1/5
Completeness	5/5
Hallucination	Hallucinated
Weighted overall score	35/100
Final verdict	Fail

Agent reasoning

Agent	Reasoning
Relevance judge	The response addresses 100% of what the question asks about (semantic similarity 0.80, combined relevance signal 0.94), which falls in the 'Completely relevant' band. This judge measures only whether the question was addressed; factual correctness is evaluated separately by the Accuracy Judge.
Accuracy judge	Checked 1 claim(s) against the reference answer: 1 directly contradicted. Verdict: Completely incorrect / contradictory. The contradicted claim is: "The capital of France is London."
Completeness judge	Identified 1 requirement(s) in the question: 1 addressed, 0 partially addressed, 0 missing. Verdict: Completely complete.
Hallucination detector	Extracted 1 claim(s) from the response and checked each against the available evidence: 0 supported, 0 unsupported, 1 contradicted. Overall status: Hallucinated. Unsupported claims are unverified by this evidence, not proven false.
Verdict agent	Weighted overall score 35.00/100 (accuracy 0, hallucination 0, completeness 100, relevance 100; weights 35/30/20/15) maps to a base verdict of 'Fail'. Final verdict adjusted to 'Fail' by 3 critical rule(s). Consolidated issues: Low accuracy (1/5): Completely incorrect / contradictory. Hallucination status is 'Hallucinated' (1 of 1 claims flagged). Critical rule triggered: hallucination status is 'Hallucinated' (every checked claim is contradicted by the evidence), so the verdict cannot be higher than Fail. Critical rule triggered: accuracy score is 1 (completely incorrect / contradictory), so the verdict cannot be higher than Fail. Critical rule triggered: 100% of checked claims are directly contradicted by the evidence (severe contradiction), so the verdict cannot be higher than Fail.

Supporting evidence used

- The capital of France is Paris.

Retrieved reference evidence

Source	Evidence
demo	Paris is the capital and most populous city of France. It is located on the Seine River in the north of the country and has been the country's capital since the 12th century.

Hallucinated or unsupported claims

Claim	Status	Evidence	Reasoning
The capital of France is London.	Contradicted	The capital of France is Paris.	Classified as Contradicted because the evidence gives a different named answer for the same fact. Evidence used: "The capital of France is Paris."

Completeness: missing aspects

No missing aspects were identified for this response.

Major issues

- Low accuracy (1/5): Completely incorrect / contradictory.
- Hallucination status is 'Hallucinated' (1 of 1 claims flagged).
- Critical rule triggered: hallucination status is 'Hallucinated' (every checked claim is contradicted by the evidence), so the verdict cannot be higher than Fail.
- Critical rule triggered: accuracy score is 1 (completely incorrect / contradictory), so the verdict cannot be higher than Fail.
- Critical rule triggered: 100% of checked claims are directly contradicted by the evidence (severe contradiction), so the verdict cannot be higher than Fail.

Result 4: 4

Source: Batch 2

Question

What are the advantages of Python?

AI response

Python has readable syntax, a large library ecosystem, supports multiple programming paradigms, and is widely used in data science and web development.

Reference answer

Python offers readable syntax, extensive libraries, portability, rapid development, and applications in areas such as web development, automation, data science, and AI.

Source information supplied

Python advantages reference

Scores and verdict

Dimension	Result
Relevance	4/5
Accuracy	2/5
Completeness	5/5
Hallucination	Partially hallucinated
Weighted overall score	55/100
Final verdict	Needs Improvement

Agent reasoning

Agent	Reasoning
Relevance judge	The response addresses 50% of what the question asks about (semantic similarity 0.64, combined relevance signal 0.54), which falls in the 'Mostly relevant' band. This judge measures only whether the question was addressed; factual correctness is evaluated separately by the Accuracy Judge.
Accuracy judge	Checked 1 claim(s) against the reference answer: 1 not confirmed either way. Verdict: Mostly incorrect.
Completeness judge	Identified 1 requirement(s) in the question: 1 addressed, 0 partially addressed, 0 missing. Verdict: Completely complete.
Hallucination detector	Extracted 1 claim(s) from the response and checked each against the available evidence: 0 supported, 1 unsupported, 0 contradicted. Overall status: Partially hallucinated. Unsupported claims are unverified by this evidence, not proven false.
Verdict agent	Weighted overall score 55.00/100 (accuracy 25, hallucination 50, completeness 100, relevance 75; weights 35/30/20/15) maps to a base verdict of 'Needs Improvement'. Final verdict: 'Needs Improvement'. Consolidated issues: Low accuracy (2/5): Mostly incorrect. Hallucination status is 'Partially hallucinated' (1 of 1 claims flagged).

Supporting evidence used

- Python offers readable syntax, extensive libraries, portability, rapid development, and applications in areas such as web development, automation, data science, and AI.

Hallucinated or unsupported claims

Claim	Status	Evidence	Reasoning
Python has readable syntax, a large library ecosystem, supports multiple programming paradigms, and is widely used in data science and web development.	Unsupported	Python offers readable syntax, extensive libraries, portability, rapid development, and applications in areas such as web development, automation, data science, and AI.	Classified as Unsupported: only 44% of the claim's meaningful words appear in the evidence (embedding similarity 0.88), which is below the 60% support threshold. The evidence does not confirm this claim and does not contradict it either, so it is unverified rather than false.

Completeness: missing aspects

No missing aspects were identified for this response.

Major issues

- Low accuracy (2/5): Mostly incorrect.
- Hallucination status is 'Partially hallucinated' (1 of 1 claims flagged).

Result 5: 5

Source: Batch 2

Question

What is machine learning?

AI response

Machine learning is a branch of artificial intelligence in which systems learn patterns from data to make predictions or decisions.

Reference answer

Machine learning is a field of artificial intelligence that enables systems to learn patterns from data and use them to make predictions or decisions without being explicitly programmed for every task.

Source information supplied

Machine learning reference

Scores and verdict

Dimension	Result
Relevance	5/5
Accuracy	5/5
Completeness	5/5
Hallucination	No hallucination
Weighted overall score	100/100
Final verdict	Pass

Agent reasoning

Agent	Reasoning
Relevance judge	The response addresses 100% of what the question asks about (semantic similarity 0.83, combined relevance signal 0.95), which falls in the 'Completely relevant' band. This judge measures only whether the question was addressed; factual correctness is evaluated separately by the Accuracy Judge.
Accuracy judge	Checked 1 claim(s) against the reference answer: 1 confirmed by the reference answer. Verdict: Completely correct.
Completeness judge	Identified 1 requirement(s) in the question: 1 addressed, 0 partially addressed, 0 missing. Verdict: Completely complete.
Hallucination detector	Extracted 1 claim(s) from the response and checked each against the available evidence: 1 supported, 0 unsupported, 0 contradicted. Overall status: No hallucination. Unsupported claims are unverified by this evidence, not proven false.
Verdict agent	Weighted overall score 100.00/100 (accuracy 100, hallucination 100, completeness 100, relevance 100; weights 35/30/20/15) maps to a base verdict of 'Pass'. Final verdict: 'Pass'. No major issues identified across any of the four judges.

Supporting evidence used

- Machine learning is a field of artificial intelligence that enables systems to learn patterns from data and use them to make predictions or decisions without being explicitly programmed for every task.

Hallucinated or unsupported claims

No claim in this response was unsupported or contradicted.

Completeness: missing aspects

No missing aspects were identified for this response.
